

Following is a list of recent lightning-caused fires in the Okanogan-Wenatchee National Forest.
Updated August 18, 2014

Firefighting crews have been able to respond to all recent lightning caused fires. Most of these fires have been less than a tenth of an acre in size. Many of the fires have been contained or extinguished and the rest are in patrol status. *

Northern area of the Okanogan-Wenatchee NF (Methow Valley and Tonasket Ranger Districts)

Fire Name	Location	Size	Status

Central area of the Okanogan-Wenatchee NF (Chelan, Entiat and Wenatchee River Ranger Districts)

Fire Name	Location	Size	Status

Southern area of the Okanogan-Wenatchee NF (Cle Elum and Naches Ranger Districts)

Fire Name	Location	Size	Status

* Once a line has been constructed around a fire and there are no threats to the line (which can reasonably be expected to hold under the foreseeable conditions), the fire is put in **patrol status**. When a fire is in patrol status fire crews will go back to the fire to check if any new smokes have appeared since the last time they were there.

National Forest fire crews continue to assist other federal, state and county resources in responding to fires burning on non-national forest system lands.
